

PRD High-X Range – Z Frame

Dimensions

Z Frame Sizes

The Z Frame is manufactured to suite the size of the PRD whether used with a grill kit or a louvre kit and to suite the thickness of the wall or door.

Z Frame

The High-X Range of Pressure Relief Vents are 110mm deep and for some applications they need to be installed in walls or doors that are thinner than the depth of the PRD.

The Z Frame is used to cover up and protrusion made when the PRD is installed and make the system look aesthetically pleasing.

The Z Frame comes in a white powder coated or galvanised finish to suite the application.

The outside of the unit is supplied to fit the external Grill or the Weather Louvre.

This item helps to provide a professional finish to the installation.

This item is only needed in application where the wall, Door or structure has a thickness of less than 110mm
